SUMMARY

Masters Computer Science graduate with 1.5 years of experience in full-stack development. Project experience focuses on data engineering and machine learning. Seeking full time position in software development, data engineering, or machine learning.

PROFESSIONAL EXPERIENCE

Epic Systems, Verona, WI: Software Developer June 2023 – October 2024

- Coordinated a full-stack project displaying lookup records used translating flat files across multiple web activities (Typescript, React, Mumps, C#, & PowerPoint)
- Discovered, Prototyped, and Solved complex crash causing React issue in the Ghost To-Structure project
- Resolved over 50 critical crash and user experience issues through careful analysis of legacy code (Typescript & React)
- Collaborated with a team of 15 developers to launch the Data Transformation Activity, the focus of the Data Aggregation team for over 3 years.

EDUCATION

M.S. Computer Science (Big Data Systems) March 2025 – March 2026
Arizona State University, Tempe, AZ 3.57 GPA
Relevant Coursework: Data Processing At Scale, Data Mining, AI, Deep Learning in Visual Computing, and Data Visualization

B.S. Computer Science; Minor: Data Science August 2019 – May 2023
University of Virginia, Charlottesville, VA 3.51 GPA
Relevant Coursework: Programming and Data Representation, Algorithms, Machine Learning, Data Science Systems, Software Development Methods, Software Testing, HCI in Software Development, Intro to Cybersecurity

TECHNICAL SKILLS AND CERTIFICATIONS

Data Analysis and Statistics: SQL, R, Excel, Tableau, Apache Spark, and Scala
Programming: Python, TypeScript, Java, C++, C#, C, JavaScript, and React
Certifications: Amazon Web Services Cloud Practitioner – August 2022

PROJECTS

Glucose Monitor Analysis Project Fall 2025
Analyzed sensor data from a glucose and insulin sensor to predict characteristics from unlabeled data:

- Predicted whether a patient ate a meal from glucose distribution features with 57% accuracy using RandomForestClassifier
- Created glucose amount clusters using DBSCAN and K-Means clustering with perfect accuracy and 100 SSE

Geospatial Analysis Project Fall 2025
Implemented functions to process geospatial data from NoSQL and SQL databases using Apache Spark and UnQLite:

- Developed helper functions to provide businesses within a specified city and within a specified radius from a businesses NoSQL database (Python)
- Determined the top 50 most popular NYC taxi pickup locations in terms of count and the getis-ord statistic through analyzing a geospatial multiyear taxi SQL database (Apache Spark & Scala)

Mental Health Coordinating Machine Learning Project Fall 2022
Led team of three to design and develop a machine learning model to predict mental health issues from social media posts:

- Extracted predictive features from >100K social media posts using natural language processing techniques including sentiment analysis, text statistics, and polarity scores (Python)
- Harnessed SVCs and CNNs to predict mental health issues in posts with 98% accuracy and precision

Data Science Extract Transform Load Project Fall 2022
Exemplified proper database management through creating star schema databases for summarized Nobel Prize reports:

- Enriched a database operating on Azure and Databricks through streaming data from APIs, SQL databases, and CSV files for real-time analysis of Nobel Prize information in Data Science Systems (Python)

OTHER WORK EXPERIENCE

Erie Insurance, Richmond, Virginia: Claims II Intern May 2022 – August 2023

- Analyzed claims resolved by ERIE claims adjusters and learned overview of the insurance industry including underwriting
