SUMMARY

Agentic AI Developer building multi-agent, retrieval-grounded systems on Azure as a SkillStorm trainee, with 1.5 years of full-stack experience at Epic Systems. Microsoft Certified Azure AI Apps and Agents Developer Associate and Claude Certified Developer with an M.S. in CS from Arizona State University. Experienced in agent workflows, MCP servers, hybrid retrieval, and evaluation.

PROFESSIONAL EXPERIENCE

SkillStorm, Remote: Agentic AI Developer

July 2026 – Present

- Built agentic AI systems on Azure AI Foundry, AI Search, and Document Intelligence in a project-based program
- Delivered the agents, rules engine, MCP server, CLI, and evaluation for a two-person HIPAA breach-analysis system
- Built the grounded knowledge and retrieval layer for a 15-person, five-team agentic IT helpdesk automation system

Epic Systems, Verona, WI: Full-Stack Software Developer

June 2023 – October 2024

- Led the Embedded Lookup full-stack project to streamline flat-file translations in the Data Transformation Activity, improving data translation accuracy and reducing manual lookup time for hospital operations analysts
- Resolved over 50 critical UX defects in legacy code, reducing support tickets, and improving workflow stability for end users
- Supervised the critical and complex Ghost To-Structure project, which corrected the instability of the mapping workflow
- Launched the Data Transformation Activity, the focus of the 15-developer team, automating the time-intensive data translation loading process.

EDUCATION

M.S. Computer Science (Concentration in Big Data Systems)

March 2025 - May 2026

Arizona State University, Tempe, AZ

3.57 GPA

Relevant Coursework: Data Processing At Scale, Data Mining, AI, Deep Learning in Visual Computing, and Data Visualization, Algorithms, Engineering Blockchain Applications

B.S. Computer Science; Minor: Data Science

August 2019 – May 2023

University of Virginia, Charlottesville, VA

3.51 GPA

TECHNICAL SKILLS AND CERTIFICATIONS

Agentic AI: Multi-agent orchestration, MCP tool servers, RAG, hybrid search, golden-set evaluation, human-in-the-loop review

Azure AI: Azure AI Foundry, Azure AI Search, Azure AI Document Intelligence

Programming Languages: Python, TypeScript, SQL, Java, C#, C++, and React

Data Analysis and Statistics: R, Excel, Tableau, Apache Spark, and Scala

Certifications: Microsoft Certified: Azure AI Apps and Agents Developer Associate – August 2026, Anthropic Claude Certified Developer – Foundations – August 2026, Microsoft Certified: Azure AI Fundamentals – August 2026, AWS Cloud Practitioner – August 2022, Big Data Professional Certification – ASU

PROJECTS

Perimeter: Multi-Agent HIPAA Breach Notification Analyzer

August 2026

Two-person multi-agent system that analyzes privacy incidents under federal HIPAA and drafts cited findings for human approval:

- Built the multi-agent workflow graph and a deterministic rules engine applying five HIPAA thresholds
- Built a seven-tool MCP server with agent tool calling, and the CLI core with graceful, unique error codes
- Built incident packets verifying that low-confidence document extraction escalates to a human reviewer
- Created a 23-case golden set and ran judged evaluations (pass rate 52% to 86%); wrote the architecture report

HelpDesk AI Automation System: Knowledge & Retrieval

September 2026

Grounded knowledge layer for a 15-person, five-team agent that triages IT tickets and runs human-approved account actions:

- Structured three corpora (runbooks/policy, manuals for 11 laptops, closed tickets) into hybrid-search indexes
- Extracted manuals with Document Intelligence; built a chunker cutting sub-100-token chunks from 24.8% to 17.8%
- Enforced device-model filtering and multi-hop runbook-to-policy retrieval, and defined the topics that drive refusal testing
