SUMMARY

Full-Stack Software Developer (1.5 years of experience) most recently at Epic Systems where I resolved over 50 critical UX defects and launched multiple projects including the Data Transformation (Web) Activity. M.S. in CS graduate from Arizona State University where I managed databases with millions of entries and utilized machine learning models to analyze large data sources. Seeking full-time and contract positions in software development, data engineering and analytics, and artificial intelligence (AI) development.

PROFESSIONAL EXPERIENCE

Epic Systems, Verona, WI: Full-Stack Software Developer

June 2023 – October 2024

- Led the Embedded Lookup full-stack project to streamline flat-file translations in the Data Transformation Activity, improving data translation accuracy and reducing manual lookup time for hospital operations analysts
- Resolved over 50 critical UX defects in legacy code, reducing support tickets, and improving workflow stability for end users
- Supervised the critical and complex Ghost To-Structure project, which corrected the instability of the mapping workflow
- Refined the Data Aggregation's team testing instructions which improved communication and productivity of code review
- Launched the Data Transformation Activity, the focus of the 15-developer team, automating the time-intensive data translation loading process.

EDUCATION

M.S. Computer Science (Concentration in Big Data Systems)

March 2025 - May 2026

Arizona State University, Tempe, AZ

3.57 GPA

Relevant Coursework: Data Processing At Scale, Data Mining, AI, Deep Learning in Visual Computing, and Data Visualization, Algorithms, Engineering Blockchain Applications

B.S. Computer Science; Minor: Data Science

August 2019 – May 2023

University of Virginia, Charlottesville, VA

3.51 GPA

Relevant Coursework: Programming and Data Representation, Algorithms, Machine Learning, Data Science Systems, Software Development Methods, Software Testing, HCI in Software Development, Intro to Cybersecurity

TECHNICAL SKILLS AND CERTIFICATIONS

Programming Languages: Python, TypeScript, SQL, Java, C#, C++, and React

Data Analysis and Statistics: R, Excel, Tableau, Apache Spark, and Scala

Certifications: Amazon Web Services Cloud Practitioner – August 2022, Big Data Professional Certification – Arizona State University

PROJECTS

Glucose Monitor Data Mining and Analysis Project

Fall 2025

Analyzed sensor data from a glucose and insulin sensor to predict characteristics from unlabeled data:

- Predicted whether a patient ate a meal from glucose distribution features with 57% accuracy using RandomForestClassifier
- Created glucose amount clusters using DBSCAN and K-Means clustering with perfect accuracy and 100 SSE

Mental Health Coordinating Machine Learning Project

Fall 2022

Led team of three to design and develop a machine learning model to predict mental health issues from social media posts:

- Extracted predictive features from >100K social media posts using natural language processing techniques including sentiment analysis, text statistics, and polarity scores
- Harnessed SVCs and CNNs to predict mental health issues in posts with 98% accuracy and precision

Geospatial Analysis Project

Fall 2025

Implemented functions to process geospatial data from NoSQL and SQL databases using Apache Spark and UnQLite:

- Created helper functions to display businesses within a specified city and radius from a business's NoSQL database
- Determined the top 50 most popular NYC taxi pickup locations in terms of count and the getis-ord statistic through analyzing a geospatial multiyear SQL database with over a million taxi trips (Apache Spark & Scala)
